

Adam & Margaret Grieve Queensland, Australia

Adam and Margaret Grieve operate a 4000ha property about 600kms west of Brisbane, just south of a small town called Muckadilla, in Queensland, Australia.

The enterprise consists of a White Dorper stud of 120 stud ewes and about 3000 commercial ewes together with about 500ha cultivation for wheat as well as cattle. The Grieves started using Select Sheepware three years ago and said

“We have found Select Sheepware to be a great general management tool and it also makes it easy to identify problem ewes in the flock, we now find it essential for our pedigree flock.

We tried a number of management programmes before deciding on Select Sheepware. Both of us find it simple to use and it converted for use in Australia without any problems. The program is evolving all the time and George at TGM Solutions is very open to ideas for improvements. It’s always great to see suggestions that we’ve made in future updates.

Possibly one of the best attributes of Select Sheepware is the backup and help from TGM Solutions. Even though the distance from Muckadilla to Ireland is vast, the response is very quick. Emails are usually waiting in the morning, or in the case of when hands on problem solving is needed, somebody can easily connect to our own computer and remedy the problem.”
